

HTS VACUUM FILLER

For small businesses and industrial producers

Our machine development and construction keep pace with the latest vacuum technology. We aim to produce reliable, durable and efficient machinery and equipment for meat processing. Knowledge of modern systems, high-quality materials and years of experience enable us to meet market requirements. Our designs meet rising hygiene standards and the need for simple, effective cleaning.

The HTS feed system ensures accuracy with every fill

The HTS feed system ensures smooth filling without loss of quality, resulting in excellent products and uniform portions. High-grade stainless steel and exceptionally precise manufacturing deliver high performance. The robust materials used in the HTS feed system ensure lasting durability and minimal wear.

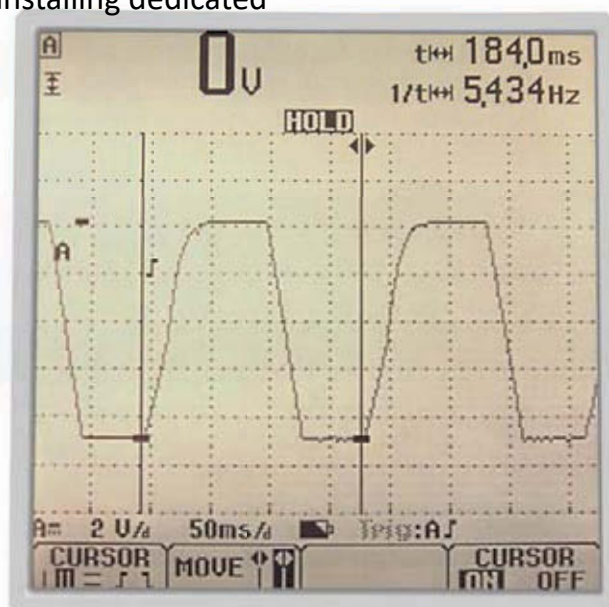

Clear, easy-to-use machine controls

The newly developed touchscreen (*HTS Touch Screen*) is easy to use and uses clear operating symbols. Programme settings can be changed quickly and easily, improving production efficiency. The number of products and the amount of material used are recorded, providing daily, monthly, yearly and lifetime production and consumption figures. A new feature controls the filling motor's acceleration, enabling gentle, smooth filling even with natural casings. Operating faults are reported and displayed, and the machine stops if safety is compromised. The interface includes USB access for importing and exporting parameters and installing dedicated programmes. The HTS industrial computer is based on

Windows CE 6.0.

Connection to the customer's company network is also available as an option.
