Double-paddle mixer with loader

Mixing machine for meat and other food products. It has a rigid, all-stainless-steel construction and complies with EC safety requirements.

The bowl has a capacity of 900 litres and a safety lid. Two paddles rotate towards one another at different heights in the bowl. The product is fed into the bowl using the loader. After processing, the paddles guide it towards the discharge system. Mixing speed and paddle direction are adjustable using the controller.

The operator can inspect the product from a platform/step built into the machine body. After mixing, the product is discharged into a 200-litre bin through a special opening at the lowest point on the front of the machine. A protective cover is fitted above the opening. Several systems protect the operator during use.

Dimensions

Length	180 cm
Width with loader	200 cm
Width without loader	115 cm
Height with loader	240 cm
Height without loader	170 cm

Capacity and power

Bowl capacity	900 L
Motor power	9.2 kW
Loader motor power (additional)	0.75 kW
