FR 200L

Hamburger and patty forming machine

Automatic machine for forming hamburgers and patties from meat and other products. It has a 40-litre hopper and an 800 mm x 200 mm stainless steel conveyor, and is mounted on swivel castors with brakes. The FR200L can produce 15–30 pieces per minute, or 1800 hamburgers or patties per hour, in various shapes. Processing time and output may vary for products other than meat. The FR200L is a 4th-generation model incorporating advanced technology. Two independent motors drive the machine rotor and the discharge conveyor. The improved rotor technology allows the machine to be partially loaded. It can therefore also be used for filling salami. The control panel is mounted on the machine body for convenient operation, maintenance and repair. The finished product can vary in thickness and weight. The plastic hamburger forming plate measures 620 mm x 180 mm, with a maximum thickness of 16 mm. A system for forming ćevapi can also be fitted, with adjustable product thickness and weight.

Technical data

Motor power	a) 1 x 1.5 kw b) 1 x 2.2 kw
Length	128 cm plus 66 cm conveyor
Width	105 cm including control panel
Height	167 cm including hopper
